*The usual stuff

A friend of ours Jack*, from the Chiltern Vic, area moved to Tingha NSW last year to start a new adventure cattle farming. Excitedly he packed up his family, wife and three sons, and they set off to Tingha. Yes it has been dry up there but nothing prepared me for the pictures he shared on Facebook recently. Their farm is around 2200 acres and as of 13th Feb they have 100 of those acres left, the rest is burnt to a crisp. They saved 200 odd cattle, their house, the shearing shed, and the hay shed. In a matter of hours, strong winds forced a fire upon them with flames up to 30ft high. Jack* has never seen anything like it in his life and is thankful to have made it out better than most and still have a house. Our thoughts are with Jack* and his family, along with all the other farmers fighting flood, drought and fires. Australian farmers battle harsh conditions day in , day out. *Not his real name

Maintenance

The guys will be covering some ground again this year carrying out JD Disc seeder maintenance within the following areas: Forbes, Horsham, Serpentine, Boort, Griffith and Warren just to name a few. If you require a visit, please let us know in the coming days so we can schedule you in. We again managed to start early this year and have already knocked over 8 machines. We can overhaul your machine within a matter of days, using custom made tools and a lot of knowledge and previous experience. Check out the links to our latest videos showcasing how quickly we can remove and replace your pivot bushes. (video link on last page)

Don't forget, "bevel to boot" when replacing your discs

Andrew has been keeping track of onsite maintenance locations via google maps. You can see here; the yellow markers represent some of the locations we travel to when servicing JD machines.

Can you Help us? Please. We are in need of some generous farmers who are willing to let us film their machines whilst sowing. Unlike previous media recordings, we no longer need to interrupt your sowing time. We have a drone that we can fly alongside you without having to disturb you at all. We also need some new Aricks wheel trials. If you are willing to help in either of these areas, please contact Jacqui 0418865125 to arrange. All you need is a JD 1590, 1890 or 1895 and we will do the rest.

Parts Range

We are slowly increasing our aftermarket product range to help make your machine as reliable as we can. We don't intend to stop there either. If you have an issue with the longevity of a JD product on your 1590, 1890 or 1895, let us know and we will see if we can help.

We all get our fair share of unwanted emails and its annoying, so if you do not wish to receive our newsletter please reply to our email with the words UNSUBSCRIBE.

What our customers are saying:

Operating 2 x 60ft John Deere 1890 disc seeders (5 years), sowing small seeds (canola) & fitted with aricks residue managers. "After using the Aricks wheels we would not operate the seeders without them. They are also advantageous for chemical incorporation".

"We also use the Aricks non-greasing bush kits in our closing and press wheel pivots and have just replaced them after 50,000 acres per seeder. It was debatable whether they even needed changing at this time. These bushes work flawlessly and save enormous amounts of time in not having to constantly grease these 2 machines".

Extensive family farm in the Mallee/Wimmera region

Look what arrived

3" Mudsmith gauge wheels are here

Look how excited Col was unpacking 1000 of these by hand. Not to mention the 500 tyres!
