Feb 2024

Colin and I were lucky enough to travel to Canada last year, in preparation for a new business venture. We have teamed up with Thunderstruck Ag who is a distribution and Marketing Company based in Canada. Thunderstruck represent a number of Quality Agricultural Products/Brands across North America, many of these were introduced by Farmers. Aricks Products/Brand is now included in Thunderstruck's Portfolio for exclusive North American distribution.

Colin and Jacqui

IN THIS EDITION

* Welcome
* Aricks Press Wheels
* New Products
* Disc Prices
* On-line Shop
* Checklist
* Canada Pics
* The Usual Stuff

Aricks Press Wheels are here!

AA389

- Narrow Profile to fit seed slot
- Flexible & smooth surface for mud shedding
- Wide bearing for added strength and durability
- UV resistant material for longevity
- 6 Lipped seal Bearing
- Fits JD 90 & ProSeries openers

New Products

Aricks Press wheels

Our new press wheels come with a wide bearing for extra stability. Equipped with 6 seals per side, these babies will keep the dust out and your press wheels turning for years to come. The smooth surface allows flexibility and improved mud shedding capabilities far superior to the OEM version. If you think this bearing profile looks familiar, you are correct as it also fits the Gauge and Closing Wheels.

Copperhead Ag Concaves video

THUNDERSTRUCK™ AG EQUIPMENT

AWARD WINNING AG INNOVATION

TAKING YOUR HARVEST TO NEW LEVELS OF EFFICIENCY

TNT COVER PLATES

AVAILABLE FOR JOHN DEERE & CASE IH MODELS
X9 & FENDT COMING SOON!

Introducing our innovative, patent-pending **TNT Cover Plates** for Copperhead Ag Concaves – transforming how single-rotor machines deliver material to sieves and taking your grain harvest to new levels of efficiency.

A common issue with single-rotor machines is sieve losses due to imbalanced delivery of grain from the concaves onto the sieve sections of the combine.

We've engineered a solution that fundamentally alters the delivery point of grain which provides a balanced load across all of the sieves.

BENEFITS

Our number one and two Cover Plates are designed for all crops.

Extensive testing has demonstrated that these Plates do more than just optimize grain delivery – they also enhance the threshing area of the Concaves, without overly reducing the Concave separation area.

The design of our third and fourth Plates perfectly meet the challenges of hot, dry conditions.

Your crops, your machinery, and your bottom line will thank you.

A word from Inventor
ROBERT RUWOLDT

"We had been using Copperhead Concaves for a few years and designed the TNT Cover Plates to complement the concave performance.

The theory behind the plate design is to control the drop point off material onto the sieves and by controlling that point we have considerably improved the performance off the rotor combines by increasing the separation area.

We have improved the sample of the grain and greatly improved capacity off these single rotor machines, and at the same time greatly reduced grain losses from the combines."

Lapina Disc's

Disc Wear

We get asked a lot about disc wear and when should discs be replaced?

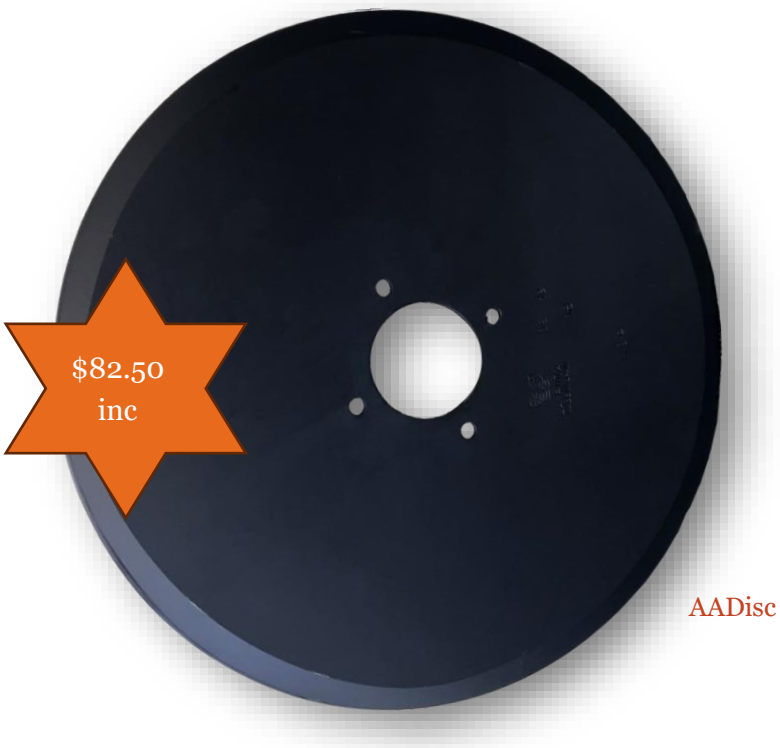
It really depends on a number of factors including, ground conditions, sowing speed and how deep your pockets are ha-ha. Before 16" is an absolute must if you don't want to end up replacing your boots too. How many acres are you going to sow? Are you prepared to change in the middle of sowing? 17" is typically a good time to replace your discs otherwise you risk poor seed placement and unnecessary wear on your boots.

Getting one more season out of your disc's may seem like a good idea at the time, but the resulting cost of having to replace all your boots due to excessive wear may not go down well after the fact. Ultimately the decision is of course yours, but if you use hard boots, you may just decide to replace your disc's sooner than later to save money in the long run.

Price comparison OEM v's Aricks

50 x JD discs = $6,002 inc
50 x JD hard boots = $13,569 inc
50 x JD Pro Hard boots = $19,108 inc

50 x Aricks discs = $4,125 inc
50 x Aricks hard boots = $11,550 inc
(aricks boots fit both 90 and ProSeries)



AADisc

Did you know?

We have been promoting and using Lapina disc's for 14 years.

We believe they are every bit as good as any on the market. Lapina Disc's are made from High Quality Spanish Boron steel

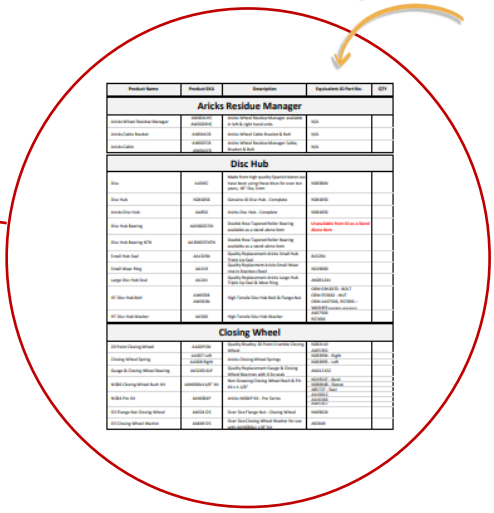
Parts Price list

We've decided to include a link to our online shop for up to date pricing instead of publishing the entire parts price list in the newsletters. If you click on the image adjacent, it will open up our Shop home page.

click here for more



A Downloadable/Printable Check list has been added to the shop. Take this sheet with you when inspecting your Seeder to be sure you don't miss any parts.

2ND Hand Openers

Did you know we buy and sell 2nd hand openers? We salvage and fully rebuild the openers using new parts then offer for sale to those interested in respacing their machines. If you have excess openers or are in the market for them, give us a call to discuss 0260330744.

Very limited supply available

Parts Range

We are slowly increasing our aftermarket product range to help make your machine as reliable as we can. We don't intend to stop there either. If you have an issue with the longevity of a JD product on your 1590, 1890 or 1895, let us know and we will see if we can help.

We all get our fair share of unwanted emails and its annoying, so if you do not wish to receive our newsletter, please reply to our email with the words UNSUBSCRIBE.
